EDA Report - Persian Voice Command Dataset

Dataset: manifest.csv | 100 rows | 6 columns

Metric	Result
Rows / columns	100 / 6
Missing cells	0
Duplicate complete rows	0
Duplicate file_path values	0
Unique commands	5
Unique speakers	2
Sample rate	16000 Hz
Train / test	50 / 50

Duration statistic	Seconds
Mean	2.103
Median	2.064
Std. deviation	0.235
Minimum	1.680
Q1	1.872
Q3	2.286
Maximum	2.736

Interpretation

• All five command classes contain 20 records, so the manifest is class-balanced.

• The training split contains 50 records from voice01; the test split contains 50 records from voice02. This is speaker-independent within the two available synthetic voices.

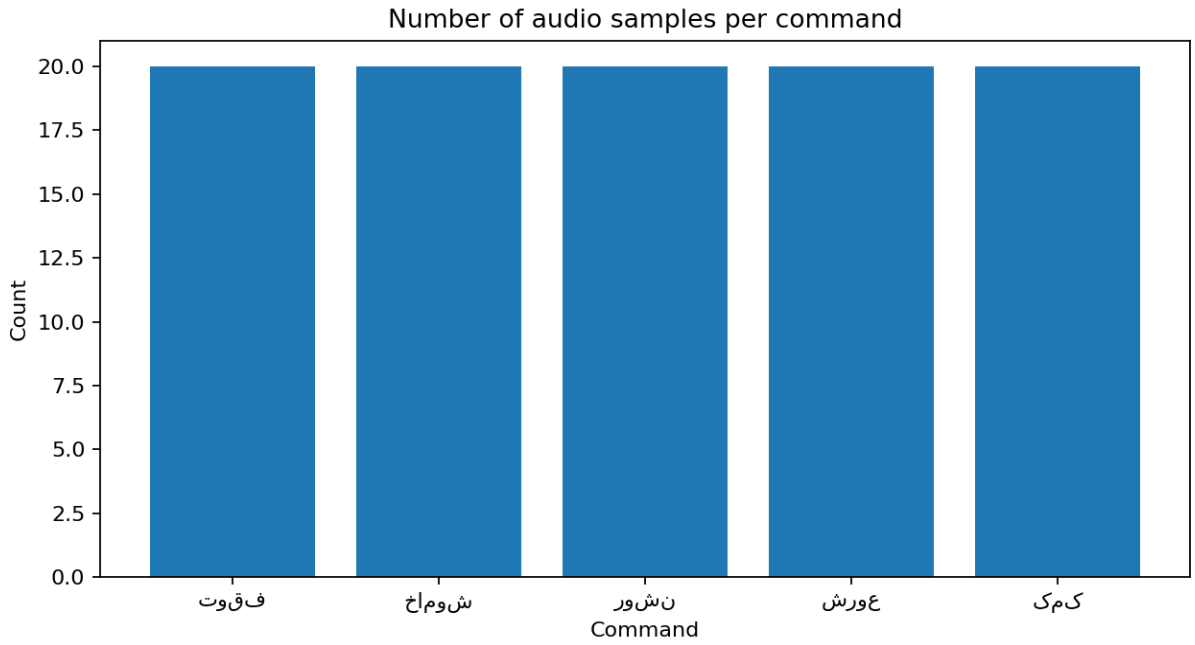

• Mean duration is 2.103 seconds (SD 0.235), with a range of 1.680 to 2.736 seconds.

• No missing values, exact duplicate rows, or duplicate file_path entries were found. Repeated basenames across speakers are expected because the same naming pattern is used under separate speaker folders.

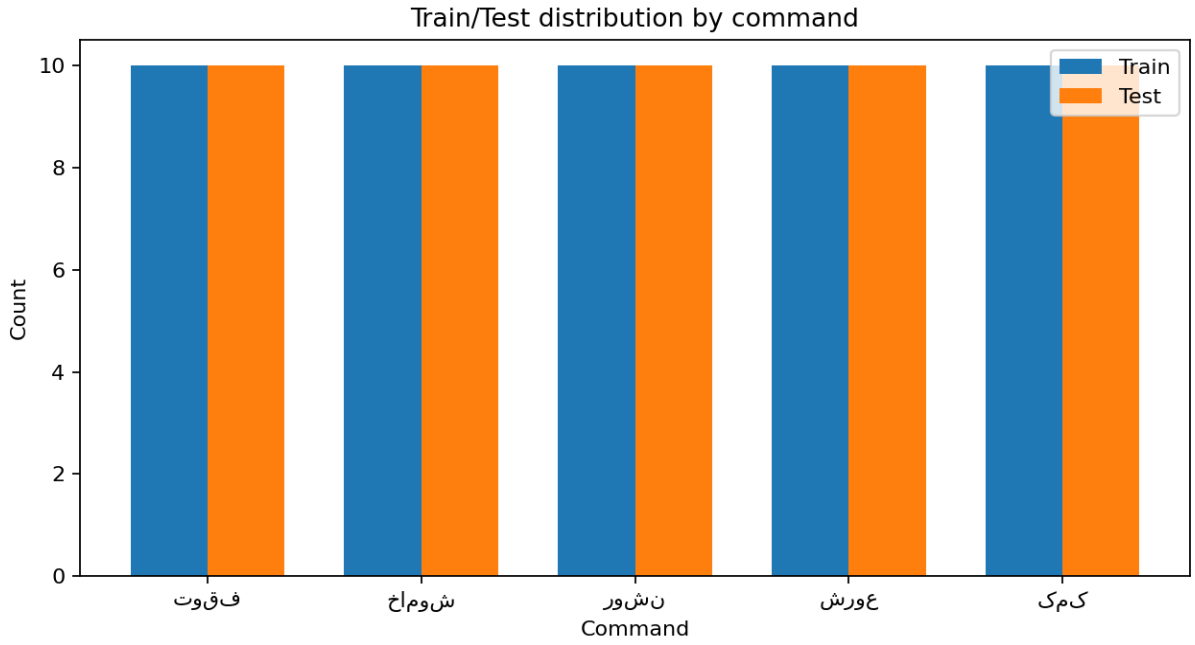

• All records indicate a 16 kHz sample rate. This is consistent metadata, but waveform-level properties such as clipping, silence, and signal quality cannot be verified from the manifest alone.

• The dataset is synthetic TTS data with only two voices. Findings cannot establish performance on real users or diverse recording conditions.
